Calibration Exciter Types 4294 and 4294-002

Uses
- Precise field calibration of vibration transducers
- Rapid calibration and checking
- Quick, easy field calibration of vibration measurement and recording systems

Features
- Small, lightweight, and battery-driven
- Leather case for impact protection
- Designed for everyday use in harsh environments
- Acceleration, velocity and displacement calibration
- High-precision, crystal-controlled servo operating at 159.15 Hz (1000 rad s⁻¹)
- Drop- and environment-tested according to IEC 60068
- Splash-proof according to IP 54 (IEC 60529)

Description
Type 4294 permits accurate adjustment of measuring instrumentation at a standard acceleration level of 10 ms⁻² (0 – 70 g load). The reference signal may additionally be used for velocity and displacement calibration, at 10 mms⁻¹ and 10 µm, respectively.

Type 4294-002 permits accurate adjustment of measuring instrumentation at a standard acceleration level of 3.16 ms⁻² (0 – 200 g load). The reference signal may additionally be used for velocity and displacement calibration, at 3.16 mms⁻¹ and 3.16 µm, respectively.

The calibrator embodies an electromagnetic exciter driven by a crystal oscillator at a frequency of 159.15 Hz (1000 rad s⁻¹). Servo feedback via a small accelerometer on the underside of the vibration table is used to maintain a constant and accurate vibration level independent of the mass of the transducer under test (70 g for Type 4294 and 200 g for Type 4294-002).

To prevent overload, power for the calibrator is automatically disconnected if a transducer mass above a certain level is mounted on the table (70 g for Type 4294 and 200 g for Type 4294-002).

Use of the calibrator is very straightforward. The transducer is conveniently attached to the calibrator table using a 10–32 UNF Steel Stud (YQ-2962). Alternatively, the 10 g Mounting Disc (DB-2996) supplied, provides a convenient means of attaching transducers manufactured with 3 mm threads or those fitted with Mounting Magnet UA-0642. The mounting disc also permits the attachment of transducers with either beeswax or cyanoacrylate adhesive.

The calibrator is actuated by pressing the small button on the side of its housing. Following system adjustment, the calibrator is switched off by pressing the button a second time. To prolong the useful life of its built-in battery, Type 4294 automatically switches off after approximately 100 seconds.
### Specifications – Calibration Exciter Types 4294 and 4294-002

**Distortion**
- 4294: < 2% for 10 to 70 g
- 4294-002: < 2% for 10 to 200 g load
- 4294 & 4294-002: typical < 7% for 0 to 10 g. Use DB-2996 (10 g) with very light accelerometers to achieve 2% distortion

**Power Requirements**
- **Built-in Battery**: One 9 V Alkaline Battery QB-0016 (IEC type 6LR61)
- **Battery Life**: Approx. 200 calibrations, each lasting 100 s with automatic switching off at the end of each calibration
- **Warm-up Time (Seconds)**: < 10 s
- **Signal Duration (Seconds)**: 103 ± 1 s with automatic stop
- **Long-term Stability**: Better than 1% per year for acceleration, velocity and displacement; better than 10 ppm per year for frequency

**Physical Characteristics**
- **Length**: from bottom to top of hex screw: 135 mm (5.3 in) – see Fig. 1
- **Diameter**: with case: 46 mm (1.8 in), without case: 43.5 mm (1.7 in)
- **Weight**: 500 g (17.6 oz) including battery and leather case
- **Transducer Mounting**
  - Maximum Load (g): 70 – 200
  - Mounting Torque (Nm): max. 0.5
  - Mounting Thread: 10–32 UNF

**COMPLIANCE WITH STANDARDS**
- **EMC Directive and Low Voltage**
- **Safety**: EN/IEC 61010–1; UL 61010B–1
- **EMC Emission**: EN/IEC 61000–6–3; EN/IEC 61000–6–4; CISPR22: Radio disturbance characteristics of information technology equipment. Class B Limits; FCC Rules, Part 15: Complies with the limits for a Class B digital device
- **EMC Immunity**: EN/IEC61000–6–1; EN/IEC 61000–6–2; EN/IEC61326 (Note: Only guaranteed using accessories listed in this product data)
- **Temperature**: IEC 60608–2–1 & IEC 60688–2–2:
  - Operating Temperature: +10 to +40°C (50 to 104°F) for 10 ms⁻² reference within ± 3% and 3.16 ms⁻² reference within ± 3%
  - –10 to +55°C (14 to 131°F) for 10 ms⁻² reference within ± 5% and 3.16 ms⁻² reference within ± 5%
  - Storage Temperature: –25 to +70°C (–13 to 158°F)
  - Change of temperature: –10 to +55°C (2 cycles, 1°C/min)
- **Humidity**: IEC 60608–2–78: Damp Heat: 90% RH (non-condensing at 30°C (86°F))
- **Mechanical**: Non-operating:
  - IEC 60608–2–6: Vibration: 0.3 mm, 20 m/s², 10 – 500 Hz
  - IEC 60608–2–27: Shock: 1000 m/s²
  - IEC 60608–2–29: Bump: 1000 bumps at 400 m/s²
- **Enclosure**: IEC 60529: Protection provided by enclosures: IP 54

### Ordering Information
- **Type 4294**: Calibration Exciter (70 g load)
- **Type 4294-002**: Calibration Exciter (200 g load)

Types 4294 and 4294-002 include the following accessories:
- Leather Case
- QB-0016: 9 V Battery
- YQ-2962: 10–32 UNF Steel Stud
- DB-2996: Mounting Disc Adaptor
- Calibration Chart

**OPTIONAL ACCESSORIES**
- 4294-CAI: Accredited Initial Calibration
- 4294-CAF: Accredited Calibration
- 4294-EW1: Extended Warranty, one year extension
- 4294-002-CAI: Accredited Initial Calibration
- 4294-002-CAF: Accredited Calibration
- 4294-002-EW1: Extended Warranty, one year extension

**RE-CALIBRATION**
Periodic re-calibration of Type 4294 is recommended in order to maintain the high accuracy of the vibration unit, and in order to have proof of traceability. Depending on the application, a re-calibration every 1–3 years is recommended.
