Hand-held Analyzer Type 2250-L (2250 Light) has been developed specifically for measuring occupational, environmental and product noise, while complying fully with all the relevant national and international standards.

Extensive user studies have been paired with state-of-the-art technology to make this analyzer a robust, effective and practical tool for those applications.

Using the large, high-contrast, touch screen interface, the analyzer can easily be set up to display and measure just what is needed from the extensive list of parameters provided by the analyzer.

Together with Measurement Partner Field App, MP Cloud and Measurement Partner Suite for post-processing, 2250 Light is a complete solution for your measurement needs.

Uses and Features

Uses
- Environmental noise assessment
- Occupational noise evaluation
- Hearing protection selection
- Noise reduction
- Product quality control
- General purpose Class 1 sound measurements
- Real-time analysis of sound in 1/1- and 1/3-octave bands
- Tone assessment using 1/3-octave methods
- Loudness and noise rating measurements
- Time history analysis for broadband parameters and spectra (Logging)
- Audiometer calibration

Features
- Hardware
  - Large, high-resolution, touch-sensitive colour screen
  - ‘Traffic light’ status indicator
  - Plug-in rechargeable Li-ion battery (>8 h operation)
  - Robust and environmentally protected (IP 44)
  - Data storage on high-capacity plug-in memory cards or USB flash drive
  - USB 2.0 host for connection to printer, GPS, weather station, modem
  - Upgrade to Type 2250 or 2270 with the trade-in program
- Software
  - Multilingual user interface: 23 languages
  - 120 dB dynamic range – up to 140 dB
  - 24- or 16-bit recording of all or parts of a measurement
  - Broadband and spectrum logging (optional BZ-7133)
  - Logging profile display with markers (optional BZ-7133)
  - Back-erase for manual delete of unwanted noise events
  - Full Measurement Partner Suite support software for archiving, exporting and post-processing
  - Simultaneous measurement of noise and weather parameters with weather station
  - Measurement Partner Cloud
  - Measurement Partner Field App (iOS, Android)
Introduction
Type 2250-L is built on the core platform of the award winning design of Type 2250 and maintains the renowned Brüel & Kjær measurement excellence and the Type 2250 platform’s ease of use in an efficient and versatile sound measurement instrument. Whether addressing workplace noise compliance, environmental noise assessment, or product noise certification, Type 2250-L offers the functionality needed to meet your requirements. Type 2250-L is fully compliant with IEC 61672-1 (see the specifications section for compliance information) and is delivered with a number of predefined measurement templates tailored to suit specific requirements.

The comfortable and secure design feels safe in your hand, and the buttons fall precisely where they need to be for a one-thumb operated start, stop and save. The ‘traffic light’ indicator surrounding the Start/Pause pushbutton gives you an immediate visual indication of measurement status, even in the brightest sunshine. The large, high contrast, touchscreen/display, lets you select parameters on the display and easily store those setups in your Type 2250-L for future measurements.

When on site, the weather station kit measures weather parameters that are stored on Type 2250-L together with the noise data. Measurement Partner Field App provides measurement annotation and control, keeping you out of the sound field and improving the quality of your measurement. After completion, upload your measurement data to MP Cloud and it is ready for you or a colleague to post-process using Measurement Partner Suite, which has tools to help you extract exactly what you need from your data.

This data sheet describes the suite of software applications available for Type 2250-L. All analyzers come with the Sound Level Meter Software for 2250 Light (BZ-7130) included.

Upgrade to Full Type 2250 or 2270
Type 2250-L can be upgraded to a Hand-held Analyzer Type 2250 or 2270, which has more features and supports a wider range of applications, such as enhanced logging, triggered signal recording and reverberation time software (see product data BP 2025 for more information). The upgrade is on an exchange basis, contact your local Brüel & Kjær representative for details.

Workplace and Industrial Hygiene Noise Measurement Applications
Type 2250-L is an easy-to-use, powerful tool to make you more productive, and more confident measuring noise at work. Type 2250-L was developed with workplace noise as a special concern.

Type 2250-L has all the necessary occupational health noise parameters. It can measure Fast and Slow, and A- and C-weighted sound pressure levels simultaneously (along with a separately weighted peak detector) so that the values you need to specify hearing protection are immediately on the display. Parallel analysis allows you to compare a 3 dB exchange rate average measurement with a selectable alternate 4, 5 or 6 dB exchange rate, including separate dose, expected dose and exposure values.

Type 2250-L offers three independent threshold peak event counters, along with simultaneous Fast, Slow and Impulse RMS detectors, to assess impulsive noise.

With the optional 1/1- and 1/3-octave frequency analysis software options, instantly assess noise control and detailed hearing-protection requirements for a surveyed location. All the octaves are measured at the same instant, along with broadband A- and C-weighted values, so there is no filter switching or range changing.
Sometimes noise levels in the workplace vary dramatically, and perhaps irregularly. To assess this kind of noise it is helpful to measure and analyse a noise profile – a measurement that shows how the sound varies with time. The logging option for Type 2250-L provides this capability in a natural, intuitive way. If you have installed the 1/1- or 1/3-octave real-time frequency analysis option, Type 2250-L seamlessly integrates the spectrum information into the noise profile.

Signal Recording Option BZ-7226 lets you record the measurement signal in order to identify and document sound sources.

Easily export, archive and report your measurements using Measurement Partner Suite BZ-5503, or export the results to Brüel & Kjær’s Protector™ Type 7825, where you can organize and document a company’s noise and hearing conservation program. Type 7825 calculates noise exposure according to ISO 9612–2.

**Environmental Noise Assessment Applications**

The tasks for environmental noise measurements are varied, so the instrument you pick for your measurements needs to be flexible, easy to configure, powerful and accurate. Type 2250-L is all that and more, ideal for a simple noise enforcement measurement one moment and for a complex environmental impact survey the next.

Type 2250-L with included Sound Level Meter Software BZ-7130 is ideal for spot noise enforcement checks. Press the Start pushbutton and, when ready, press the same button to stop the measurement. Press the Save pushbutton and you will not only be saving the results, but also the time and duration of the measurement and the date and time of the last calibration.

Type 2250-L can measure all the parameters needed for environmental noise, including dual-frequency weightings, fast, slow, and impulse time averaging, $L_{eq}$ and a full range of statistical distributions. Just as important, you can set Type 2250-L to display only the parameters you need and save that display so Type 2250-L starts, tailor-made for your use, every time.

For more involved environmental applications, you will need to add the Logging option. Now you can set the analyzer to record all, or up to ten selected measurement results at intervals from one second to one day, for a duration up to 1 month. The display offers two simultaneous views, one of the complete profile and a ‘zoomed-in’ 100-sample ‘window’, that are intuitively linked by the cursor.

For the precise timing of noise events, an alternative Fast Log view gives you the $L_{AF}$, $L_{AS}$ and $L_{Aeq}$ results for 100 ms intervals. In either the fast log, or profile view, you can define up to five different markers anywhere in the profile, to identify noise sources or events. When you use the real-time frequency analysis options, 1/1-octave or 1/3-octave, the frequency spectrum average, maximum and minimum values can be logged along with the overall values. With the Tone Assessment Option, annoying tones in the spectrum can be assessed according to the ISO 1996 standard. Save and view the noise profiles on your Microsoft® Windows® PC using Measurement Partner Suite and use its optional modules for noise assessment based on logging and frequency analysis.

Make these measurements with the incredible 120 dB dynamic range of Type 2250-L, allowing measurements from the low noise floor of the analyzer to over 140 dB. Without a range switch to consider, you can now make measurements without fear of overload, and still capture the nuances of a silent night. Type 2250-L is an ideal entry point to safe, easy and precise environmental noise measurements.
Brüel & Kjær long ago set the standard for product noise measurements. Now, whether you have a simple A-weighted sound limit requirement, or need to evaluate a 1/3-octave reverberation chamber sound power test, Type 2250-L is scalable to your requirements.

Type 2250-L can be used as a hand-held device for easy portability, or it can be operated using your Windows® PC as an online-, USB- or LAN-controlled device in your laboratory. The user-defined templates make switching between applications easy.

The wide 120 dB dynamic range of Type 2250-L eliminates concern for overloads, and you can set a preset measurement time to add consistency to your measurements. Use the built-in headphone style (3.5 mm) output jack to send the signal out to other measurement instrumentation. Measurement Partner Suite (included) makes it easy to keep track of results in an organized archive structure.
The Hand-held Analyzer Hardware

Great care has been taken to ensure that the hardware is ergonomically optimal in field use. The key features of Type 2250 Light are shown in Fig. 1.

**Fig. 1 Key features of Hand-held Analyzer Type 2250**

- **Microphone/Preamplifier Stage:**
  - Falcon™ Range ½” microphone and microphone preamplifier stage
  - The microphone preamplifier stage is able to drive an extension cable of up to 100 m, a valuable feature when a measurement requires remote location of the microphone

- **Navigation Pushbuttons:**
  - Up/down, left/right arrow keys

- **Power Switch:**
  - 8 – 24 V DC input from a universal mains adapter or external batteries

- **Battery Charge Indicator LED:**

- **USB 2.0 (On-the-Go) Micro-AB socket:**
  - Allows data transfer and remote control of the analyzer directly with a host PC

- **USB 2.0 Standard A socket:**
  - For connection to USB peripherals

- **Stylus (stored):**

- **Thread for tripod/wrist strap:**

- **Battery Compartment for rechargeable battery pack:**

- **Non-slip surfaces for safe grip:**

- **Cover for protecting connectors:**

- **Red, yellow, green Status Indicators:**

- **G4 indicates hardware version 4:**

- **3.5 mm Stereo Socket for Headphones:**
  - For reviewing recorded comments or listening to measurement signals

- **Input: Not used:**

- **USB 2.0 Standard A socket:**
  - For connection to USB peripherals

- **High-speed LAN Interface:**

- **Trigger Input:**

- **Input: Not used:**

- **Battery Charge:**
  - 8 – 24 V DC input from a universal mains adapter or external batteries

- **Battery Charge Indicator LED:**
Remote Internet Communication
Access your data from anywhere by using various technologies. Type 2250-L allows direct operation through WiFi, modem connection (for example, 3G), or LAN (Ethernet).

Measurement Partner Cloud (MP Cloud)
Take advantage of modern cloud capability with 2250 Light. The analyzers can communicate with MP Cloud via WiFi, mobile connection or LAN (Ethernet). Upload your measurement data directly to MP Cloud for merging in Measurement Partner Suite with annotations collected with Measurement Partner Field App.

Store your data safely and securely in MP Cloud and share Cloud archives with anyone on the planet.

Post-processing Software
Measurement Partner Suite BZ-5503, in its basic configuration, comes with your hand-held analyzer (see Product Data BP 2430). It is Brüel & Kjær’s state-of-the-art data viewing and post-processing toolbox for environmental noise and vibration.

The free, basic configuration provides data archive, preview and export capabilities, software maintenance and online display. Archives can be stored locally, on network drives or, alternatively, in MP Cloud for easy sharing with anyone on the planet.

Measurement Partner Suite also merges field app annotations with the corresponding instrument project.
Additional valuable data analysis and post-processing tools are available on a time-limited subscription basis. You only pay for what you need, when you need it, with no penalty should your subscription lapse.

Annotating your Measurement Data

Measurement Partner Field App is the recommended solution for on-site annotation of your measurement data.

**Measurement Partner Field App**

Measurement Partner Field App transforms the way you work with your hand-held analyzer. It is an advanced companion app for the sound and vibration professional offering:

- Remote analyzer control
- Remote display
- Remote annotation of measurement data
- Cloud support

Whenever you stand next to your analyzer to operate it, you disturb the sound field. Therefore, we have released a field app that lets you stay away from your analyzer. Once your analyzer is powered on, you can wirelessly connect to it using Wireless USB-A Adapter UL-1050 for G4, Ethernet CF Card UL-1019 for G3.

Once connection is made to the analyzer, you are ready to start, stop and pause your measurement from a safe distance. During noise measurements, the instantaneous LAF profile is displayed on the field app. This allows you to keep an eye on the status of your measurement without being close to the analyzer. This is particularly important when low noise levels are being measured such as for indoor measurements.

MP Field App supports notes, voice commentary, image, video and GPS annotations. All annotations can be uploaded to MP Cloud for merging with the project in Measurement Partner Suite.

Uploading Measurement Data to Measurement Partner Cloud

Type 2250-L can send measurement data to Measurement Partner Cloud (MP Cloud) where projects are immediately available for post-processing, sharing or storage subject to account capacity. Only authorized users have access to the data when it is the MP Cloud.

You can create a Cloud account by visiting the MP Cloud web service at cloud.bksv.com. You open an account, register your analyzer serial numbers and perform a one-time pairing of analyzer and account, ensuring data security. You can also administer access to the account from the web service and order subscriptions to increase account capacity.

You can connect the hand-held analyzer to the Internet through modem, LAN or Wi-Fi connected to router. In the field, the analyzer can connect through Wi-Fi to hotspot on a smart device (Wi-Fi using CF-card UL-1019 for G1-G3 and Wireless USB-A Adapter UL-1050 for G4, respectively).

After measurement is completed and the project is saved, you log the analyzer into the cloud, and projects are uploaded to the cloud from the analyzer. To do this, you simply need to move your data to the Cloud folder, which is automatically created when you log on to your account. The data will now be ready for post-analysis in Measurement Partner Suite by anyone who has access to the relevant Cloud archive.
Type 2250-L comes with Sound Level Meter Software for 2250 Light included. Type 2250-L is a versatile broadband sound level meter that complies with the latest international standard (IEC 61672-1) as well as previous international and national standards.

All quantities are measured simultaneously. For example, A and C frequency weighted levels are measured at the same time and F, S and I time weightings are applied in parallel, and Peak levels are also measured. Full statistics are also computed on-the-fly. Combine this with the dynamic range exceeding 120 dB and never miss a beat! You get all the parameters in one attempt, under-range is non-existent and you will have difficulties provoking an overload. You get all the parameters in one attempt, under-range is non-existent and you will have difficulties provoking an overload. A full complement of occupational health sound parameters are provided simultaneously, complying with national and international standards. The detailed list of available parameters can be found in the specifications section. You choose what you want on the display, but, at any time – during or after the measurement – all other parameters can be inspected and reported.

1/1- and 1/3-octave Frequency Analysis Software for 2250 Light – BZ-7131 and BZ-7132

1/1-octave Frequency Analysis Software for 2250 Light BZ-7131, and 1/3-octave Frequency Analysis Software for 2250 Light BZ-7132 are optional software modules that enable real-time measurements in 1/1- or 1/3-octave bands over a wide frequency range. This makes it a simple matter to obtain spectra in order to, for example, select hearing protection, qualify heat and ventilation systems, or assess tonality.

The following frequency ranges are available:
- 1/1-octave spectra (centre frequencies 16 Hz to 8 kHz)
- 1/3-octave spectra (centre frequencies 12.5 Hz to 16 kHz)

Each band provides unrivalled dynamic range from the noise floor in that particular band to 140 dB. That is, a dynamic range generally in excess of 135 dB. Spectra can be A-, B-, C- or Z-weighted. Five spectra are measured and stored and, in addition, two instantaneous spectra are available for display, for example, a minimum and maximum spectrum, that can be superimposed on the display. All the broadband quantities measured by Sound Level Meter Software BZ-7130 are computed in parallel with the frequency analysis.

Tone Assessment Option – BZ-7231

Tone assessment identifies any 1/3-octave bands with audible tones above a set limit and is a standard application on all new analyzers. The assessment is based on the band’s prominence versus adjacent bands. The adjustment is the penalty to add to LAeq.

Annoying tones in the spectrum can be assessed according to the ISO 1996 standard. The level of each 1/3-octave band is compared to the level of its neighbours, and all tones as well as the overall penalty (adjustment) are indicated. The search parameters are user adjustable to suit national requirements.
With optional Logging Software enabled, Type 2250-L becomes a versatile instrument for obtaining time histories. The Logging Software allows you to select freely among the broadband parameters and log them at intervals from 1 s to 24 h. At the same time \( L_A, L_{AS} \) and \( L_{Aeq} \) can be logged at 100 ms intervals.

If Frequency Analysis Software BZ-7131 or BZ-7132 is enabled, the Logging Software additionally lets you log spectra at the same 1 s to 24 h intervals.

Logging Software BZ-7133 incorporates a number of features designed to make difficult field work as manageable as possible.

Some of these features are:

- Five user-definable markers can be set on-the-fly, making it easy to clearly indicate specific noise sources.
- Markers can be set directly on the profile display using the stylus and the touch screen. Simply ‘tap and drag’ on the part of the profile you want to mark and select a marker from the drop-down list.
- Markers can even be set after the fact. The display covers the latest 100 samples (100 s of profile when logging at 1 s intervals, otherwise more), so in most cases, you can wait for the event (or disturbance) to end before placing your marker. Alternatively, scroll back in the profile and set your marker.
- Browse easily between markers (like signal recordings).
- The profile display can be ‘frozen’ at any time (automatic when you tap the screen).

All markers and annotations are saved with the measurement. No further bookkeeping is required. When importing data into Measurement Partner Suite BZ-5503 for further analysis, markers, as well as annotations, are directly accessible on the profile.

**Charge Injection Calibration (CIC)**

Measurement integrity is vital, particularly if the system is operating unattended. CIC provides a means of auto-checking the measurement system for 10 s to ensure its continued and accurate operation.

With the Logging Software, CIC can be set to run at the beginning and end of measurement.

**Signal Recording Option – BZ-7226**

Signal Recording Option BZ-7226 works with all other applications. In all cases it allows you to make recordings of the actual measured signal. Recordings are automatically attached to the measurement and kept with it, even after transfer of the data to a PC.

One purpose of the Signal Recording Option is to let you record the measurement signal in order to identify and document sound sources. Automatic gain control is available to allow for any signal level. For example:

- Did the measured \( L_{Aeq} \) at 57 dB actually stem from the rather distant compressor, or from other sources such as nearby birds or traffic? Not necessarily easy to evaluate on site, very difficult to document convincingly later. If the signal is recorded: No discussion.
- Is it really true that this noise is impulsive and should be penalized accordingly? If the signal is recorded: There may still be a discussion, but it is then based on facts.

Another important use of signal recording is to record the signal for later processing, such as analysing an engine run-up or a machinery process cycle.
With Sound Level Meter Software BZ-7130 and Frequency Analysis Software BZ-7131, Signal Recording Option BZ-7226 lets you:

- Record all or parts of the measured signal giving rise to specific results, levels and spectra
- Set up your analyzer so that recording can be set to start automatically when the measurement is started, or you can initiate recordings manually

With Logging Software BZ-7133, signal recording can be associated with the Event Marker using the Event key or an external signal (such as with Hand Switch ZH-0680). The sound during the event is recorded and attached to the appropriate part of the profile.

In all of the above cases, the maximum duration of recordings can be set (the analyzer is only limited by available storage on the memory card currently in use). Recording signals may require large amounts of storage; therefore, Signal Recording Option BZ-7226 allows you to decide on the trade-off between storage needed and recording quality (sampling rate).

The Signal Recording Option offers a choice of 24- or 16-bit recording. You can use 24-bit recording to capture the full 120 dB dynamic range of Type2250-L, which is convenient for later signal analysis. You can use 16-bit recording to consume less memory; however, this requires selecting the level range for recording (or using the automatic gain control).

Adding Weather Parameters to Your Measurement Data

Weather conditions affect the propagation of sound, so wind speed and direction must be taken into account when measuring noise outdoors. Consequently, most environmental noise measurement standards define limits for wind speed and direction. To identify the portions of your measurement that are within allowable limits for wind speed and direction, use Weather Station Kit MM-0316-A (two parameters) or MM-0256-A (six parameters).

The weather stations are based on ultrasound technology and operate well above the upper frequency limit of the microphone. Connect your weather station to your analyzer, turn it on, and you are ready to start measuring with no software setup necessary. The weather station is powered by the analyzer’s battery, so there is no need for extra batteries.

Post-processing of Weather Data

Noise and weather parameters are captured simultaneously on the analyzer and are available for display and post-processing in Measurement Partner Suite BZ-5503 along with your noise data when you are back in the office. To quickly identify the portions of your logging profile where wind speed and direction are within the allowed limits, use Measurement Partner’s report and marker wizard (requires license BZ-5503-A).

Outdoor Protection

For outdoor environmental noise measurements, your analyzer may need extra weather protection, offered by All-weather Case Type 3535-A and Outdoor Microphone Type 4952. For details, please refer to product data BP 2251 and product data BP 2099 respectively.
Overview of Type 2250-L Software Features

Compliance with Environmental Standards

The CE marking is the manufacturer’s declaration that the product meets the requirements of the applicable EU directives. RCM mark indicates compliance with applicable ACMA technical standards – that is, for telecommunications, radio communications, EMC and EME. China RoHS mark indicates compliance with administrative measures on the control of pollution caused by electronic information products according to the Ministry of Information Industries of the People’s Republic of China. WEEE mark indicates compliance with the EU WEEE Directive.

Specifications – Hand-held Analyzer Type 2250-L (2250 Light) Platform

Specifications apply to 2250 Light fitted with Microphone Type 4950 and Microphone Preamplifier ZC-0032:

**Transducer**

**Supplied Microphone**

Type 4950: Prepolarized Free-field ½” Microphone

Nominal Open-circuit Sensitivity: 50 mV/Pa (corresponding to –26 dB re 1 V/Pa) ± 2 dB

Capacitance: 12.5 pF (at 250 Hz)

**Supplied Microphone Preamplifier**

Part No.: ZC-0032

Nominal Preamplifier Attenuation: 0.3 dB

Connector: 10-pin LEMO

Extension Cables: Up to 100 m in length between the microphone preamplifier and 2250 Light, without degradation of the specifications

**Microphone Polarization Voltage**

Selectable between 0 V and 200 V
SELF-GENERATED NOISE LEVEL
Typical values at 23 °C for nominal microphone open-circuit sensitivity:

Hardware Interface

PUSHBUTTONS
11 keys with backlight optimized for measurement control and screen navigation

ON-OFF BUTTON
Function: Press 1 s to turn on; press 1 s to enter standby; press for more than 5 s to switch off

STATUS INDICATORS
LEDs: Red, yellow and green

DISPLAY
Type: Transflective back-lit touchscreen, 240 × 320 dot matrix
Colour Scheme: Black and white
Backlight: Adjustable level and time

USER INTERFACE
Measurement Control: Using pushbuttons
Setup and Display of Results: Using stylus on touchscreen or pushbuttons
Lock: Pushbuttons and touchscreen can be locked and unlocked

USB INTERFACE
USB 2.0 OTG Micro AB and USB 2.0 Standard A sockets for Wireless USB-A Adapter UL-1050, printer or weather station

MODEM INTERFACE
Connection to Internet through GPRS/EDGE/HSPA modem connected through the USB Standard A Socket. Supports DynDNS for automatic update of IP address of host name

PRINTER INTERFACE
PCL printers, Mobile Pro Spectrum thermal printer or Seiko DPU S245/S445 thermal printers can be connected to USB socket

Inputs/Outputs
SECURE DIGITAL SOCKET
2 × SD sockets
Connect SD and SDHC memory cards

LAN INTERFACE SOCKET
- Connector: RJ 45 Auto-MDIX
- Speed: 100 Mbps
- Protocol: TCP/IP

TRIGGER SOCKET
Connector: Triaxial LEMO
Max. Input Voltage: ±20 Vpeak
Input Impedance: >47 kΩ
Precision: ±0.1 V

HEADPHONE SOCKET
Connector: 3.5 mm Minijack stereo socket
Max. Peak Output Level: ±1.4 V
Output Impedance: 32 Ω in each channel

Power
EXTERNAL DC POWER SUPPLY REQUIREMENTS
Used to charge the battery pack in the analyzer
Voltage: 8 – 24 V DC, ripple voltage <20 mV
Current Requirement: min. 1.5 A
Power Consumption: <2.5 W, without battery charging, <10 W when charging
Cable Connector: LEMO Type FFA.00, positive at centre pin

EXTERNAL AC MAIN SUPPLY ADAPTOR
Part No.: ZG-0426
Supply Voltage: 100 – 120/200 – 240 VAC, 47 – 63 Hz
Connector: 2-pin IEC 320

BATTERY PACK
Rechargeable Li-Ion battery
Part No.: QB-0061
Voltage: 3.7 V
Capacity: 5200 mAh nominal
Typical Operating Time: >11 h (screen backlight dimmed); >10 h (full screen backlight)
Use of external interfaces (LAN, USB, Wi-Fi) will decrease battery operating time. Connecting a weather station or a GPS receiver can decrease battery operating with up to 20%. Connecting Wireless Adaptor UL-1050 can decrease battery operating time up to 35%
Battery Cycle Life: >500 complete charge/discharge cycles
Battery Indicator: Remaining battery capacity and expected working time may be read out in % and time
Battery Fuel Gauge: The battery is equipped with a built-in fuel gauge, which continuously measures and stores the actual battery capacity in the battery unit
Charge Time: In analyzer, typically 10 hours from empty at ambient temperatures below 30 °C (86 °F). To protect the battery, charging will be terminated completely at ambient temperatures above 40 °C (104 °F). At 30 to 40 °C, charging time will be prolonged. With External Charger ZG-0444 (optional accessory), typically five hours
Note: It is not recommended to charge the battery at temperatures below 0 °C (32 °F) or over 50 °C (122 °F). Doing this will reduce battery lifetime

CLOCK
Back-up battery powered clock. Drift <0.45 s per 24-hour period

Storage
INTERNAL FLASH-RAM (NON-VOLATILE)
512 Mbyte for user set-ups and measurement data

EXTERNAL MEMORY CARD
Secure Digital (SD and SDHC) Card: For store/recall of measurement data

USB MEMORY STICK
For store/recall of measurement data

Environmental
WARM-UP TIME
From Power Off: <2 minutes
From Standby: <10 seconds

WEIGHT AND DIMENSIONS
650 g (23 oz) including rechargeable battery
300 × 93 × 50 mm (11.8 × 3.7 × 1.9") including preamplifier and microphone

Software Interface
PREFERENCES
Date, time and number formats can be specified

Software Interface
PREFERENCES
Date, time and number formats can be specified
The connection is password protected with two levels of protection:
- Guest level: for viewing only
- Administrator level: for viewing and full control of the analyzer

CLOUD
Connect to Measurement Partner Cloud on cloud.bksv.com for transferring data to an archive in the cloud for storage or easy synchronization with Measurement Partner Suite BZ-5503

WIRELESS
Specifications apply to Wireless USB-A Adapter UL-1050

Operating Frequency: 2.4 GHz

Data Rate:
- IEEE 802.11n: up to 150 Mbps
- IEEE 802.11g: up to 54 Mbps
- IEEE 802.11b: up to 11 Mbps

Encryption/Authentication:
- 64/128-bit WEP
- WPA-PSK
- WPA2-PSK

Range: The range is similar to a standard WLAN unit, typically from 10 to 50 m (33 to 164'), depending on the environment and the number of other WLAN transmitters in the area (smartphones, Wi-Fi, etc.)

Power Requirements: Power Consumption: <1 W

Software Specifications – Sound Level Meter Software for 2250 Light BZ-7130

Conforms with the following national and international standards:
- IEC61672–1 (2013) Class 1
- IEC 60651 (1979) plus Amendment 1 (1993–02) and Amendment 2 (2000–10), Type 1
- IEC 60804 (2000–10), Type 1
- DIN 45657 (1997–07)
- ANSI S1.4–1983 plus ANSI S1.4 A–1985 Amendment, Type 1
- ANSI/ASA S1.4–2014, Class 1
- ANSI S1.43–1997, Type 1

Note: The International IEC Standards are adopted as European standards by CENELEC. When this happens, the letters IEC are replaced with EN and the number is retained. Type 2250-L also conforms to these EN Standards

Input
CORRECTION FILTERS
For Microphone Types 4950, 4952, 4952+EH-2152 and 4184-A:
Correct the frequency response to compensate for sound field and accessories

Accessories (Type 4950 only): None or Windscreen UA-0237

Sound Field: Free-field or Diffuse-field (for Types 4952 and 4184-A only: 0° (Top) reference direction and 90° (Side) reference direction)

Analysis
DETECTORS
Parallel Detectors: On every measurement:
A- or B-weighted: (switchable) broadband detector channel with three exponential time weightings (Fast, Slow, Impulse), one linearly averaging detector and one peak detector
C- or Z-weighted: (switchable) as for A- or B-weighted

Overload Detector: Monitors the overload outputs of all the frequency weighted channels

MEASUREMENTS
X = frequency weightings A or B
Y = frequency weightings C or Z
V = frequency weightings A, B, C or Z
U = time weightings F or S
Q = exchange rate 4, 5 or 6 dB
N = number between 0.1 and 99.9

For Storage: Full statistics

MEASURING RANGES

- **When using Microphone Type 4950**
  - **Dynamic Range:** From typical noise floor to max. level for a 1kHz pure tone signal, A-weighted: 16.4 dB to 140 dB
  - **Primary Indicator Range:** In accordance with IEC60651, A-weighted: 23.6 dB to 122.3 dB
  - **Linearity Range:** In accordance with IEC60804, A-weighted: 21.5 dB to 140.8 dB
  - **Linear Operating Range:** In accordance with IEC61672:
    - A-weighted 1kHz: 24.9 dB to 139.8 dB
    - C-weighted: 26.2 dB to 139.8 dB
    - Z-weighted: 31.6 dB to 139.8 dB
  - **Peak C Range:** In accordance with IEC61672: 1kHz, 43.0 dB to 142.8 dB

SAMPLING FOR BROADBAND STATISTICS

Statistics can be based on either L_{AP}, L_{AC} or L_{AEQ}:
- Statistics L_{AFN1−7} or L_{ASN1−7} are based on sampling L_{AF} or L_{AC}, resp., every 10 ms into 0.2 dB wide classes over 130 dB
- Statistics L_{AN1−7} are based on sampling L_{AEQ} every second into 0.2 dB wide classes over 130 dB

Full distribution saved with measurement

The Std.Dev. (Standard Deviation) parameter is calculated from the Statistics

Measurement Display and Control

MEASUREMENT DISPLAYS

Measurement data displayed as numbers of various sizes and one quasi-analog bar.

Measured data are displayed as dB values, housekeeping data as numbers in relevant format.

Instantaneous measurement L_{XF} is displayed as a quasi-analog bar

MEASUREMENT CONTROL

- **Manual:** Manually controlled single measurement
- **Automatic:** Preset measurement time from 1 s to 24 h in 1 s steps

MANUAL CONTROLS:
- Reset, Start, Pause, Back-erase, Continue and Store the measurement manually
- **Auto-start:** A total of 10 timers allow set up of measurement start times up to a month in advance. Each timer can be repeated.

Measurements are automatically stored when completed

BACK-ERASE

The last 5 s of data can be erased without resetting the measurement

Measurement Status

ON SCREEN

Information such as overload and running/paused are displayed on screen as icons

TRAFFIC LIGHTS

Red, yellow and green LEDs show measurement status and instantaneous overload as follows:
- **Yellow LED flash every 5 s = stopped, ready to measure**
- **Green LED flashing slowly = awaiting calibration signal**
- **Green LED on constantly = measuring**
- **Yellow LED flashing slowly = paused, measurement not stored**
- **Red LED flashing quickly = intermittent overload, calibration failed**

NOTIFICATIONS

Sends an SMS or email daily at a specified time or if an alarm condition is fulfilled.

Alarm Conditions:
- Disk space below set value
- Internal battery enters set state
- Change in measurement state
- Reboot of analyzer

Calibration

Initial calibration is stored for comparison with later calibrations

ACOUSTIC

Using Sound Calibrator Type 4231 or custom calibrator. The calibration process automatically detects the calibration level when Sound Calibrator Type 4231 is used

ELECTRICAL

Uses internally generated electrical signal combined with a typed-in value of microphone sensitivity

CALIBRATION HISTORY

Up to 20 of the last calibrations made are listed and can be viewed on the analyzer

Signal Monitoring

The input signal can be monitored using an earphone/headphones connected to the headphone socket

HEADPHONE SIGNAL

Input signal can be monitored using this socket with headphones/earphones

Gain Adjustment: –60 dB to 60 dB

GPS Annotations

A text annotation with GPS information can be attached (Latitude, Longitude, Altitude and position error). Requires connection to a GPS receiver

Data Management

PROJECT TEMPLATE

Defines the display and measurement settings. Setups can be locked and password protected

PROJECT

Measurement data stored with the project template

JOB

Projects are organized in jobs

Explorer facilities for easy management of data (copy, cut, paste, delete, rename, view data, open project, create job, set default project name)

Software Specifications – 1/1-octave Frequency Analysis Software for 2250 Light BZ-7131 and 1/3-octave Frequency Analysis Software for 2250 Light BZ-7132

The specifications for BZ-7131 and BZ-7132 include the specifications for Sound Level Meter Software for 2250 Light BZ-7130. BZ-7131 and BZ-7132 add:
Conforms with the following National and International Standards:

- IEC61260–1 (2014), 1/1-octave Bands and 1/3-octave Bands, Class 1
- IEC61260 (1995–07) plus Amendment 1 (2001–09), 1/1-octave Bands and 1/3-octave Bands, Class 0
- ANSI S1.11–1986, 1/1-octave Bands and 1/3-octave Bands, Order 3, Type 0–C
- ANSI S1.11–2004, 1/1-octave Bands and 1/3-octave Bands, Class 0
- ANSI/ASA S1.11–2014 Part 1, 1/1-octave Bands and 1/3-octave Bands, Class 1

**Frequency Analysis**

**CENTRE FREQUENCIES**

1/1-octave Band Centre Frequencies (BZ-7131 only): 16 Hz to 8 kHz

1/3-octave Band Centre Frequencies (BZ-7132 only): 12.5 Hz to 16 kHz

**MEASUREMENTS**

X = frequency weightings A, B, C or Z

Spectra for Display and Storage:

\[ L_{\text{Xeq}}, L_{\text{Xmax}}, L_{\text{Xmin}}, L_{\text{Fmax}}, L_{\text{Fmin}} \]

Spectra for Display Only:

\[ L_X, L_F \]

Single Values:

\[ \text{SIL, PSIL, SIL3} \]

\[ L_{\text{Xeq}}(f_1 - f_2)^* \]

Software Specifications – Logging Software for 2250 Light BZ-7133

The specifications for BZ-7133 include the specifications for Sound Level Meter Software for 2250 Light BZ-7130. **BZ-7133 adds:**

**Logging**

**MEASUREMENTS**

Measurement data logged at preset periods into files on:

- SD Card
- USB Memory Stick

**Logging Period:** From 1 s to 24 h with 1 s resolution

**Fast Logging:** \( L_{\text{AP}}, L_{\text{AS}}, L_{\text{AEQ}} \) can be logged every 100 ms, irrespective of logging period. \( L_{\text{AF}} \) can be logged every 10 ms.

One spectrum \( L_{\text{EQ}}, L_{\text{F}}, L_{\text{S}} \) can be logged every 100 ms. The 10 ms \( L_{\text{AF}} \) and the 100 ms spectrum can only be stored and not displayed, but can be displayed using BZ-5503 MPS

**Broadband Data Stored at each Logging Interval:** All, or up to 10 selectable broadband data including weather data and \( L_{\text{AEQ,T,mov}} \)

**Broadband Statistics Stored at each Logging Interval:** Full distribution, or none

**Spectrum Data Stored at each Logging Interval:** All, or up to three selectable spectra (license for BZ-7131 or BZ-7132 required)

**Logging Time:** From 1 s to 31 days with 1 s resolution

**Measurement Total:** For the logging time, in parallel with logging: All broadband data, statistics and spectra (license for BZ-7131 or BZ-7132 required).

Automatic reboot and resume of operation in case of power failure

**MEASUREMENT DISPLAYS**

**Profile:** Graphical display of selectable measurement data versus time. Fast display of next or previous marker; Profile overview of entire measurement

**Spectra for Display and Storage:**

\[ L_{\text{Xeq}}, L_{\text{Xmax}}, L_{\text{Xmin}}, L_{\text{Fmax}}, L_{\text{Fmin}} \]

**Spectra for Display Only:**

\[ L_X, L_F \]

**Single Values:**

\[ \text{SIL, PSIL, SIL3} \]

\[ L_{\text{Xeq}}(f_1 - f_2)^* \]

**Y-axis:** Range: 5, 10, 20, 40, 60, 80, 100, 120, 140, 160 or 200 dB. Auto zoom or auto scale available

**Cursor:** Readout of selected band

**MARKERS**

Five user-definable markers for online marking of noise sources or events anywhere in the profile.

Markers are set using the stylus on the touch screen, or the three marker pushbuttons

**Calibration**

**CHARGE INJECTION CALIBRATION (CIC)**

Injects an internally generated electrical signal in parallel with the microphone diaphragm. Manual CIC can be performed whenever no measurement is in progress. Automatic CIC can be performed at the start and end of a logging measurement

**Notifications**

**ALARM CONDITIONS**

CIC failed (in addition to those specified for BZ-7130)

**Weather Data**

**MM-0256-A WEATHER STATION KIT**

Six parameters: Wind Speed, Wind Direction, Ambient Temperature, Ambient Humidity, Ambient Pressure, Rain Gauge

**MM-0256-A WEATHER STATION KIT**

Two parameters: Wind Speed, Wind Direction
Software Specifications – Signal Recording Option BZ-7226

Signal Recording Option BZ-7226 is enabled with a separate license. It works with all analyzer software: Sound Level Meter, Frequency and Logging Software.

For data storage, signal recording requires:
- SD Card
- USB Memory Stick

RECORDED SIGNAL
A-, B-, C- or Z-weighted signal from the measurement transducer

AUTOMATIC GAIN CONTROL
The average level of the signal is kept within a 40 dB range, or the gain can be fixed

SAMPLING RATE AND PRE-RECORDING
The signal is buffered for the pre-recording of the signal. This allows the beginning of events to be recorded even if they are only detected later.

<table>
<thead>
<tr>
<th>Sampling Rate (kHz)</th>
<th>8</th>
<th>16</th>
<th>24</th>

<td>24</td>
<td>48</td>
<td>72</td>
<td>144</td>
</tr>
</tbody>
</table>

PLAYBACK
Playback of signal recordings can be listened to using the earphone/headphones connected to the headphone socket

RECORDING FORMAT
The recording format is either 24- or 16-bit wave files (extension .wav) attached to the data in the project, easily played back afterwards on a PC using BZ-5503, Type7820 or 7825. Calibration information is stored in the .wav file allowing BZ-5503 and PULSE to analyse the recordings

Functions with BZ-7130 and BZ-7131
- Manual Control of Recording: Recording can be manually started and stopped during a measurement using a pushbutton or an external signal
- Automatic Control of Recording: Start of recording when measurement is started. Minimum and Maximum recording time can be preset

Functions with BZ-7133
- Manual Control of Recording (using Manual Event or Back-erase pushbutton, or an external signal): Recording during all of the event, or for preset minimum and maximum duration. A Sound marker is set while recording. Selectable pre- and post-recording time
- Manual Control of Recording (using touch screen): Recording for the selected time period (subject to the limitations of the pre-recording buffer). A Sound marker is set for the selected time period
- Automatic Control of Recording: Recording during all of the event or for preset minimum and maximum duration. Selectable pre- and post-recording time
- Playback: Playback of signal recordings can be listened to using earphone/headphones connected to the headphone socket
- Gain Adjustment: –60 to 60 dB

Functions with BZ-7222 and BZ-7223
- Manual Control of Recording: Recording can be manually started and stopped during a measurement using a pushbutton or an external signal
- Automatic Control of Recording: Start of recording when measurement is started. Minimum and Maximum recording time can be preset

Functions with BZ-7224 and BZ-7225
- Manual Control of Recording (using Manual Event or Back-erase pushbutton, or an external signal): Recording during all of the event, or for preset minimum and maximum duration. A Sound marker is set while recording. Selectable pre- and post-recording time
- Manual Control of Recording (using touch screen): Recording for the selected time period (subject to the limitations of the pre-recording buffer). A Sound marker is set for the selected time period
- Automatic Control of Recording: An event can be triggered when a broadband level is above or below a specified level. Recording during all of the event or for preset minimum and maximum duration. Selectable pre- and post-recording time

Functions with BZ-7227
- Automatic Control of Recording: Start of recording when measurement is started. 16-bit recording format only

Software Specifications – Tone Assessment Option BZ-7231

LICENSE
Tone Assessment Option BZ-7231 is a standard application included with all new Type 2250/2270 analyzers. The option can be used with the 1/3-octave and logging template (BZ-7132 and BZ-7133)

Tone Assessment
STANDARD

SPECTRA ASSESSED
Any displayed 1/3-octave spectrum (Leq) may be assessed

SETUP ACCORDING TO STANDARD
Setups in violation of the standard are indicated as such on the display, you may then accept to apply the default setup

Tone assessment will be made if possible, in spite of standard violations. For tone assessment according to ISO 1996–2, Annex D, you can set the division between the low and middle frequency range, the division between the middle and high frequency range, and the limits for the level differences between adjacent bands

QUALITY INDICATORS
On the display, a quality indicator (smiley) will indicate that a hint is available for tone assessment quality. Click on the indicator to see the hint

RESULTS
Tones are indicated above the spectrum when Tone is selected as spectrum parameter. The resulting adjustment can be viewed on the Value panel. It is not saved with the measurement
Specifications – Measurement Partner Suite BZ-5503

BZ-5503 is included with Type 2250-L for easy synchronization of setups and data between the PC and hand-held analyzer. BZ-5503 is supplied on ENV DVD BZ-5298

PC REQUIREMENTS

Operating System: Windows® 7, 8.1 or 10 (all in 32-bit or 64-bit versions)

Recommended PC:
- Intel® Core™ i3
- Microsoft®.NET 4.5
- 2GB of memory
- Sound card
- DVD drive
- At least one available USB port
- Solid State Drive

ONLINE DISPLAY OF TYPE 2250-L DATA

Measurements on the analyzer can be controlled from the PC and displayed online with the PC, using the same user interface on the PC as on the analyzer

Display: 1024×768 (1280×800 recommended)

DATA MANAGEMENT

Explorer: Facilities for easy management of analyzers, users, jobs, projects and project templates (copy, cut, paste, delete, rename, create)

Data Viewer: View measurement data (content of projects)

Synchronization: Project templates and projects for a specific user can be synchronized between PC and analyzer and between local and cloud archives. Measurement Partner Suite BZ-5503 merges Measurement Partner Field App annotations with the corresponding analyzer project

EXPORT FACILITIES

Excel*: Projects (or user-specified parts) can be exported to Microsoft® Excel® (Excel 2003 – 2016 supported)

Brüel & Kjaer Software: Projects can be exported* to Predictor-LimA Type 7810, Acoustic Determinator Type 7816, Protector Type 7825, Qualifier (Light) Type 7830 (7831), PULSE Mapping for Hand-held Sound Intensity Type 7962/7752/7761 or PULSE Reflex

POST-PROCESSING

Measurement Partner Suite is a suite of modules, including post-processing tools for data acquired with Type 2250-L. The following post-processing modules are available:
- Logging Module BZ-5503-A
- Spectrum Module BZ-5503-B
- WAV File Analysis Module BZ-5503-C

These modules help to assess logging data and measured spectra, such as calculating contribution from markers on a logging profile or correcting spectra for background noise

HAND-HELD ANALYZER SOFTWARE UPGRADES AND LICENSES

The software controls analyzer software upgrades and licensing of the analyzer applications

INTERFACE TO HAND-HELD ANALYZER

USB, LAN or Internet connection

LICENSE MOVER

To move a license from one analyzer to another use BZ-5503 together with License Mover VP-0647

LANGUAGE

User Interface in Chinese (People's Republic of China), Chinese (Taiwan), Croatian, Czech, Danish, English, Flemish, French, German, Hungarian, Japanese, Italian, Korean, Polish, Portuguese, Romanian, Russian, Serbian, Slovenian, Spanish, Swedish, Turkish and Ukrainian

HELP

Concise context-sensitive help in English

Ordering Information

Type 2250-L-S Hand-held Analyzer Light
Type 2250-L-SC Hand-held Analyzer Light with Sound Calibrator Type 4231

which include the following as standard:

INCLUDED SOFTWARE

- BZ-7130: Sound Level Meter Software
- BZ-7231: Tone assessment option
- BZ-7232: Noise Monitoring Software
- BZ-5503-001: Measurement Partner Suite, one month demo license for any instrument

INCLUDED MICROPHONE AND PREAMPLIFIER

- Type 4950: ½” Prepolarized Free-field Microphone
- ZC-0032: Microphone Preamplifier

INCLUDED ACCESSORIES

- FB-0679: Hinged Cover
- QB-0061: Battery Pack
- ZG-0426: Mains Power Supply
- UA-0237: 90mm dia. Windscreen
- Compulsory Accessory Kit UA-1710-D01 including:
  - KE-0441: Protective Cover, for hand-held analyzer
  - UL-1050: Wireless USB-A (M) Adapter
  - UA-1651: Tripod Extension, for hand-held analyzer
  - UA-1654: S Extra Styli
  - UA-1673: Adapter for Standard Tripod Mount
  - DH-0696: Wrist Strap
- DD-0594: Protection Plug, for hand-held analyzer without preamplifier
- AO-1494: Cable, USB 2.0, USB-A (M) to USB-micro-B (M) black, 1.8 m (5.9’), max. +70 °C (158 °F)
- BZ-5298: Environmental Software DVD

Note: These accessories are also available separately

Software and Accessories Available Separately

SOFTWARE MODULES

- BZ-7131 1/1-octave Frequency Analysis
- BZ-7132 1/3-octave Frequency Analysis
- BZ-7133 Logging Software for 2250 Light
- BZ-7226 Signal Recording Option

PC SOFTWARE

- BZ-5503-A Logging Module (see product data BP 2430)
- BZ-5503-B Spectrum Module (see product data BP 2430)
- BZ-5503-C WAV File Analysis Module (see product data BP 2430)
- BZ-5503-D Measurement Partner Field App for iOS and Android (free download at App Store® and Google Play™)
- BZ-5503-E Measurement Partner Cloud Entry Level, free cloud storage
- BZ-5503-F-012 Measurement Partner Cloud Basic, basic cloud storage subscription for one year

* Not all data are available in all exports. The data exported are dependent on the type and target of the export.
### Measurement Partner Cloud Professional, enterprise cloud storage subscription for one year

**Type 7825**  
Protector™ – calculation software of personal noise exposure

### MEASURING

| Type 3535-A | All-weather Case (see Product Data BP 2251) |
| AO-0697-D-030 | Microphone Extension Cable, 10-pin LEMO, 3 m (10') |
| AO-0697-D-100 | Microphone Extension Cable, 10-pin LEMO, 10 m (33') |
| KE-0440 | Travel Bag |
| HT-0015 | Headphones |
| UA-0254 | 90 mm dia. Windscreens (6-pack of UA-0237) |
| UA-0587 | Tripod |
| UA-0801 | Small Tripod |
| UA-0588 | Tripod Adaptor for ½" microphone/preamplifier assemblies |
| UA-1317 | Microphone Holder |
| UL-1009 | SD Memory Card for hand-held analyzers |
| UL-1017 | SDHC Memory Card for hand-held analyzers |
| UA-1251 | Lightweight Tripod |
| MM-0256-A | Weather Station Kit |
| MM-0316-A | Weather Station Kit |

### Included with MM-0256-A or MM-0316-A:
- MM-0256-002: Six-parameter Weather Station (and mounting kit)
- MM-0316-002: Two-parameter Weather Station (and mounting kit)
- AO-0657: USB Cable
- AO-0659: Cable M12 B-pin (F) to LEMO 1-B 8-pin (M), 10 m (33.3')
- BR 1779: Weather Station Field Guide
- DB-4364: Weather Station Pole Adapter
- KE-4334: Weather Station Carrying Case
- QX-0016: Screwdriver
- QX-1171: 2.5 mm Hex Wrench
- UA-1707-A: Weather Station Tripod Adapter
- ZH-0689: Weather Station USB Adaptor

### ANALYZER COMPONENTS

| ZG-0444 | Charger for QB-0061 Battery Pack |
| ZH-0680 | Hand Switch for remote control |

### CALIBRATION

| Type 4231 | Sound Calibrator |

### Service Products

### MAINTENANCE

| 2250-L-EW1 | Extended Warranty, one year extension |

### ACCREDITED CALIBRATION

| 2250-CAI | Accredited Initial Calibration of Type 2250 |
| 2250-CAF | Accredited Calibration of Type 2250 |
| 2250-CTF | Traceable Calibration of Type 2250 |
| 2250-TCF | Conformance Test of Type 2250, with certificate |
